Documentation

Installing the template

This template comes with different layouts named "layout-1", "layout-2" and so on, that are placed in folders with the same names.

To install one of these layouts, after choosing your preferred layout, let's say "layout-3", just upload all the files of the folder named "layout-3" on your server. Then read below and customize the files as you like.

Changing the backgrounds

The backgrounds are located in "[assets/img/backgrounds](#)" (inside the folder of your chosen layout). Upload in this folder all the backgrounds you want and then open the "[scripts.js](#)" file ([assets/js/scripts.js](#)). Change the backgrounds from the code:

```
/*
    Background slideshow
*/
$('.top-content').backstretch("assets/img/backgrounds/1.jpg");
$('.testimonials-container').backstretch("assets/img/backgrounds/2.jpg");
$('.call-to-action-container').backstretch("assets/img/backgrounds/1.jpg");
$('.about-us-container').backstretch("assets/img/backgrounds/2.jpg");
...
```

Setting up the email subscription form

The subscription form is used, for example, in the "layout-2" but it can be added in other layouts too.

Open the "[subscribe.php](#)" file ([assets/](#)). From there you can set up the email where you want to receive the notifications when new users subscribe. You can also set up the message to display on the page when the user subscribes or the error message.

MailChimp integration:

This template is also integrated with MailChimp. The "layout-6" comes with a MailChimp email subscription form. To set it up, in "[subscribe.php](#)" just enter your "MailChimp API Key" and your "MailChimp List ID".

You can learn how to find the API key here: <http://kb.mailchimp.com/accounts/management/about-api-keys>
and the List ID here: <http://kb.mailchimp.com/lists/managing-subscribers/find-your-list-id>

Attention: If you try this in localhost it might give PHP warnings/errors. Please try it on a working server.

MailChimp form with more input fields:

If you use a MailChimp subscription form with more input fields like, for example, in the "layout 7", your MailChimp list must contain these other fields.

In "layout 7" we have the fields *"First name"* and *"Last name"*, so our MailChimp list, where we want to save our subscribers, must have these two fields.

If it doesn't, you can learn how to add them here:

<http://kb.mailchimp.com/lists/managing-subscribers/manage-list-and-signup-form-fields>

Just follow the instructions as explained in the paragraph *"Add and Delete Fields in the List Settings"*.

When you add the new fields to your list, make sure you also enter the *"Merge tags"* that should be the same as the one used in the *"subscribe.php"* file:

```
'merge_fields' => ['FNAME' => $subscriber_firstname, 'LNAME' => $subscriber_lastname],
```

As you can see, we have used "FNAME" for the first name, and "LNAME" for the last name.

Setting up the contact form

The contact form is used, for example, in the "layout-3", "4" and "5" but it can be added in other layouts too.

Open the *"contact.php"* file (assets/). From there you can set up the email where you want to receive the messages.

You can set up the text to display on the page when the form is submitted in the file *"scripts.js"* (assets/js).

Changing the logo

You can find the logo image in the *"img"* folder (assets/img). Replace it with your logo.

Changing the favicon and apple touch icons

You can find the favicon and apple touch icons in the *"ico"* folder (assets/ico). Just replace them with the icons you want.

Changing the "testimonials" and "about" images

You can find the "testimonials" images in the "testimonials" folder (assets/img/testimonials) and the

"about" images in the "about" folder (assets/img/about). Upload in these folders the images you need and add their names in the "index.html" file.

Changing the "computer" icons

You can find the "computer" images in the "devices" folder (assets/img/devices). To customize these images you can use the PSD files available in the "psd" folder. These PSD files come in 2 sizes: normal and @2x for Retina devices (iPad, iPhone).

Using modals

"Modals are streamlined, but flexible, dialog prompts..."

<http://getbootstrap.com/javascript/#modals>

Bootstrap Modals are used for example in "layout-1" to display the "Terms and Conditions" text, in the "sign up now" form at the top. You can see the modal's HTML code from the "index.html" file of "layout-1" or learn more about modals from the link above (Bootstrap documentation).

This way you can modify the existing modals or add your own. Then, to add a link that opens the modal just use this HTML code:

```
<a href="#" class="launch-modal" data-modal-id="modal-terms">Terms and Conditions</a>
```

Just put the modal's id in the attribute "data-modal-id" and you're done.

Other settings

The plugins used in this template come with many other settings. If you want to use these settings or you need other documentation, you can find all the plugins' homepage links in the "Attributions.txt" file (attributions/Attributions.txt).

How to contact me?

For every question, information or suggestion here are some links you can use to contact me:
